

Architectural Cellular PVC Interior Casing & Jamb Extension

Cellular PVC components meet today's building challenges by eliminating problems naturally associated with wood.

Our cellular PVC casings and jamb extensions are an excellent alternative to wood because they:

- Won't rot, crack, stick or swell.
- Resist splintering, splitting.
- Resist twisting, bowing.
- Resist moisture absorption.
- Resist insect damage.
- Contain no laminations.
- Provide easy maintenance.
- Have an architecturally correct traditional appearance.
- Can be sawed, nailed, routed, drilled and glued.

Bendable cellular PVC casings and jamb extensions match the most popular wood designs, as shown in the examples below. They are available in two styles: primed white (W) and tan stainable (S). Detailed finishing instructions are provided with each order for the tan stainable product.

As shown in the photograph above, square rosettes in real pine wood* also are available: 2.5 x 2.5 inches and 3.5 x 3.5 inches.
